

799 – Digital Supply integration a key to low & unmanned installations

Authors: Svein Edvin Håvåg (ABB), Tor-Ole Bang-Steinsvik (ABB)

Abstract: May 2021 ABB and Equinor launched a pilot project called Digital Supplier Integration, ABB collaborates with Equinor on digital integration to improve operations at offshore assets.

The focus in the abstract will be further value by onboarding other assets, development of new tools/ use cases/ use of AI/ML to earlier detect faults and predict several years upfront when maintenance is needed.

Will also elaborate combination of other tools like different simulators to be able to predict the consequence if these component/system is failing.

Since this is a collaboration with Equinor I will ask them to join in presenting the abstract.
